

# H3000

Designed to appeal to both the serious cruising and racing owner, H3000 was an evolution of a successful formula. It has now been superseded by the H5000 system.

Technological improvements experienced with the new H3000 system were striking, with particular advances in display technology, ease of use, ease of installation and durability. H3000 added new products and new functionality to the B&G range.

## Upgrade to H5000

Customers with H3000 systems on board can upgrade all of their displays (GFDs, FFDs, GPDs, Mast Displays and Analogues), non-compatible sensors and processors (Hydra, Hercules and Performance) to H5000.

The H5000 Fastnet Interface provides a B&G supported solution for customers wishing to progressively upgrade H3000 systems and/or replace displays on an H3000 system with the latest H5000 Graphic displays. The Interface receives instrument data from the H3000 Fastnet network and re-transmits it onto the CAN based H5000 network. The Interface is a valid data source for all instrument data and can be selected from the Network Source Selection in H5000.
